

Introduction of Color Toolbox FGLT: simple, fast, free, effective & diverse for everybody in color calculation (scientific exchange - no commercial)

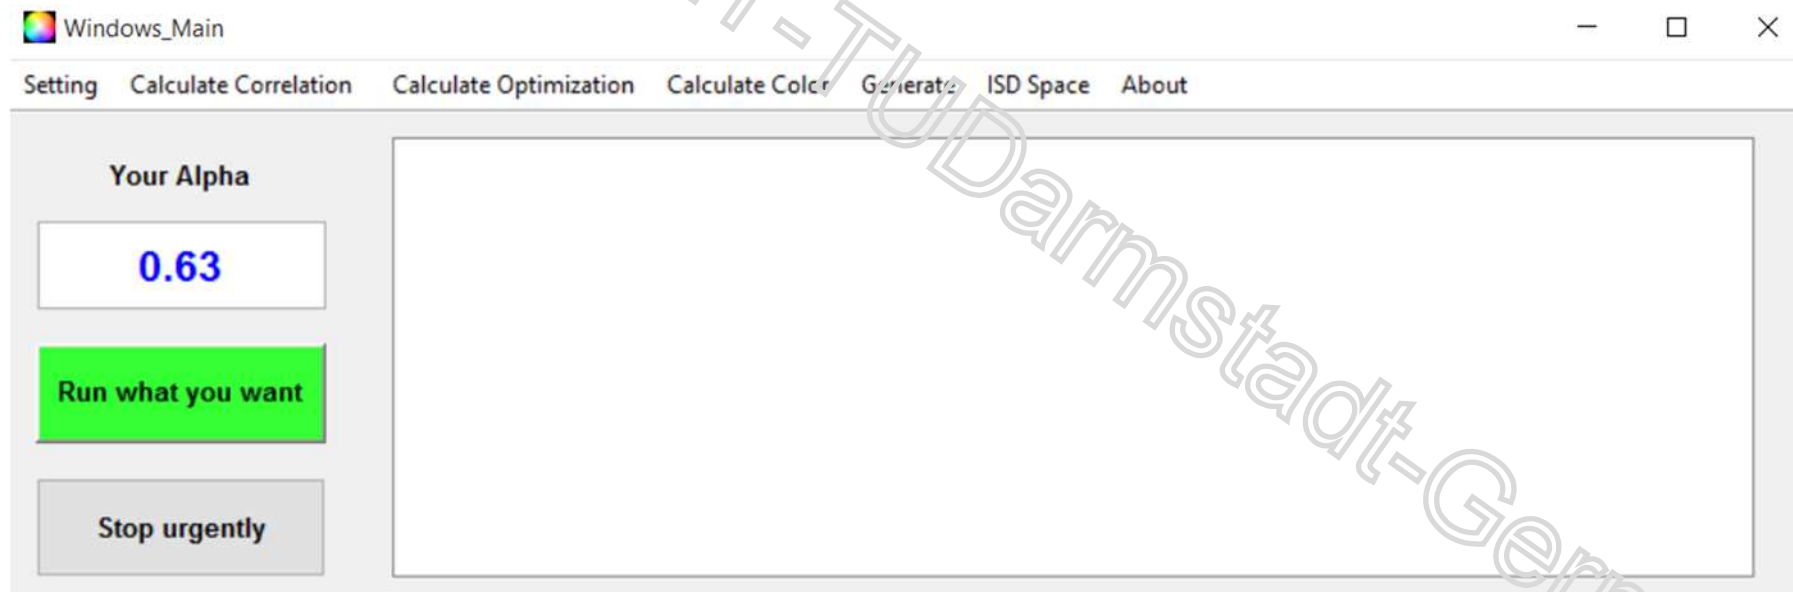

TECHNISCHE
UNIVERSITÄT
DARMSTADT

FACHGEBIET
LICHTTECHNIK

© Dr. - Ing. Vinh Trinh – Fachgebiet Lichttechnik – TU Darmstadt - Germany

Content

1. Motivation
2. Installation
3. Main mode *“Run what you want”*: to evaluate the color quality of your spectra
4. Mode *“Calculation correlation”*: find 2D & 3D correlations as SPSS
5. Mode *“Calculation Optimization”*: optimize color quality & synthesis PID for regulators
6. Mode *“Calculate Color”*: calculate all color difference, Chroma difference, represent correct test color sample with their true color under different light sources
7. Mode *“Generate”*: generate standard spectra, locus of Mac Adam-Ellipse, spectra of semiconductor LED and phosphors
8. Mode *“ISD Space”*: read, arrange and save ISD data from spectrometers

1- Motivation

How to evaluate color quality of spectra?

How to evaluate and represent color objects?

How to find correlations like SPSS?

How to have 1-2..MacAdam-Ellipse for desired CCT or xy?

How to read, arrange & save ISD data from spectrometer?

How to optimize the color quality?

How to generate standard light sources with desired CCTs?

How to generate spectra of semiconductor LEDs?

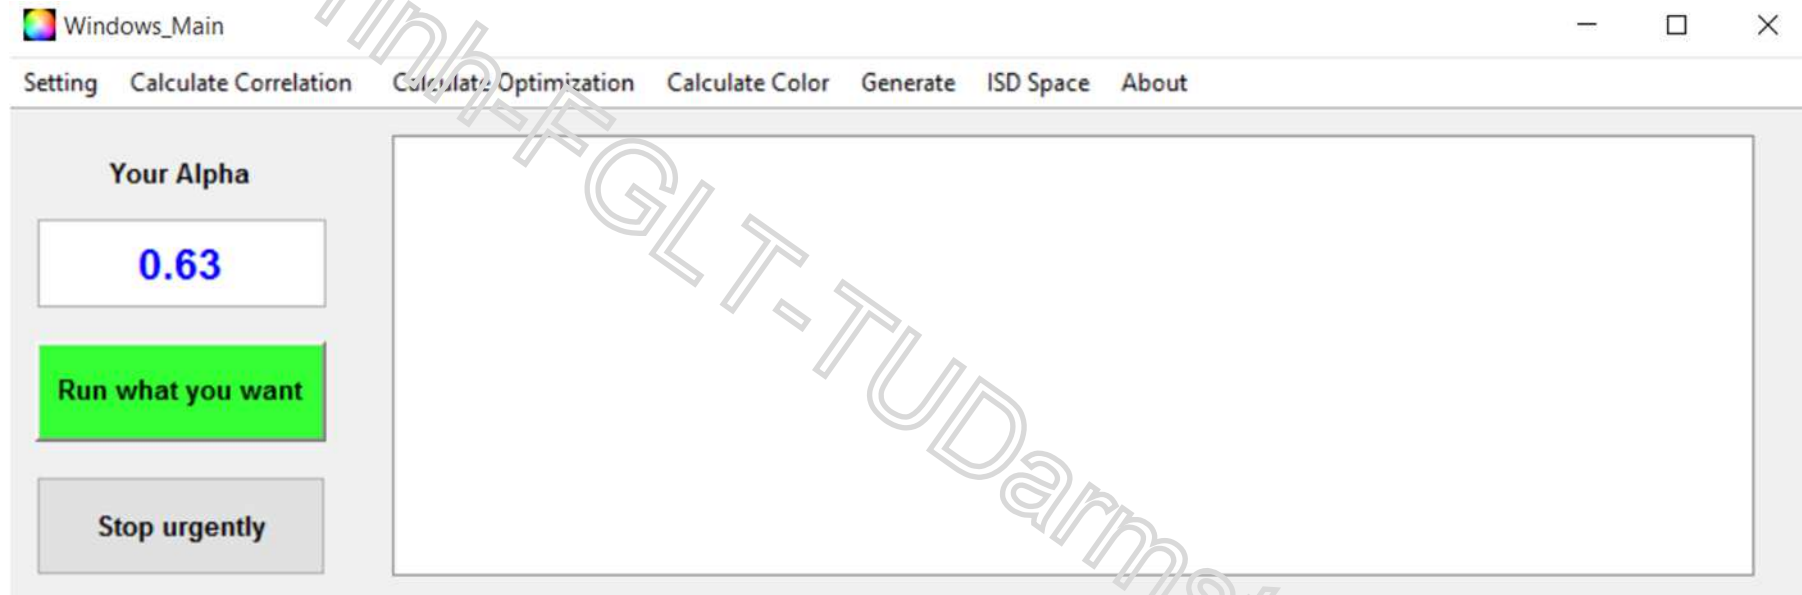

How to generate spectral emission of phosphors?

I can't work with .csv & others, but only Excel or txt?

I need for my research/study - not for commercial.

1- Motivation

Color Toolbox FGLT will help you!

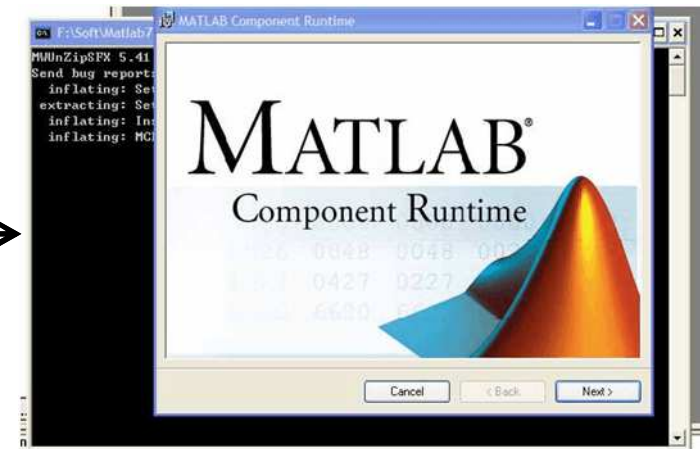

But only for scientific exchanges - not for commercial!

2- Installation

you need a MCR Matlab as runtime like Java, .Net & Setup file
